Lucas Flaquer

Senior Full Stack Engineer | React, Next.js, Node.js, TypeScript

Sorocaba, SP, Brazil (GMT-3) | lucas.flaquer@gmail.com | linkedin.com/in/lucas-flaquer | github.com/LucasFlaquer | lucasflaquer.github.io
Remote | Available as contractor (PJ) | Flexible hours, São Paulo time zone preferred

PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 7+ years building and shipping web products with TypeScript, React, Next.js and Node.js across banking, SaaS, life sciences and AI-powered products. Strong in SSR and performance, API design (REST, GraphQL, SSE, WebSockets), automated testing and code quality, working with distributed teams in the US, Asia and Brazil. Delivered a **+30% increase in registered companies** through a redesigned flow validated by an A/B test. Works daily with AI-assisted, spec-driven development using Claude Code.

TECHNICAL SKILLS

Frontend: React, Next.js (SSR/SSG), TypeScript, JavaScript, Vue.js, Zustand, Redux, TanStack Query, Tailwind CSS, styled-components, Material UI, Storybook, accessibility best practices
Backend: Node.js, NestJS, Express, REST, GraphQL, WebSockets, SSE, Better Auth (multi-tenant), Redis; also Python and C# (.NET)
Data & Cloud: PostgreSQL, MySQL, MongoDB, AWS (Lambda, S3), Docker
Testing & Quality: Jest, Vitest, React Testing Library, Playwright, Cypress, Biome, ESLint, SonarQube, GitHub Actions, Vite
Practices: A/B testing, Clean Architecture, DDD, SOLID, spec-driven development, Scrum, Kanban, Figma

AI-ASSISTED DEVELOPMENT

- Spec-driven workflow with **Claude Code**: PRD and ADRs before coding, task generation and refinement, sequential (or parallel) execution, then automated review and QA before opening the PR. In daily use for the last ~3 months.

PROFESSIONAL EXPERIENCE

Full Stack Engineer | 99x (consultancy, PJ) - Client: Printly 2026
AI-assisted print ordering product: end-customer chat, print-shop admin panel and backend. MVP in production (beta). Team of 2 developers and 1 architect.

- Built the **NestJS / PostgreSQL backend** that orchestrated three applications (customer chat, admin panel and a client-built RAG assistant), acting as middleware between them.
- Implemented **multi-tenant authentication** with Better Auth, lead management endpoints, and file management for knowledge-base documents and user uploads.
- Delivered **real-time messaging with SSE** (streamed assistant responses) and the hand-off from the RAG assistant to a human print-shop operator.
- Built a **dynamic form generated by the RAG** and rendered in the chat to collect order details, plus admin tables with server-side loading and TanStack Query pagination (Next.js, Tailwind CSS).
- Set up **Biome** (via Ultracite) for linting and formatting and covered the critical MVP workflows with tests.

Frontend Engineer | 99x (consultancy, PJ) - Client: SteepRock Sep 2025 - Early 2026
AI-powered SaaS platform for the life sciences industry connecting doctors, organizations and hospitals. Teams across the US, Asia and Brazil.

- Refactored the UI with the **composition pattern**, reducing console errors and extracting a reusable **Storybook component library**.
- Owned an internal administrative project end to end (React, Material UI).
- Led the migration from **ESLint to Biome**, significantly reducing lint time.
- Coordinated releases and quality with QA teams overseas (mostly in India).

Full-Stack Developer | FCamara - Client: BTG Pactual (Timberland Investment Group) May 2025 - Aug 2025
Greenfield forestry funds platform managed by BTG Pactual and Timberland. Team of 2 developers, a tech lead and a PO; weekly meetings in English with the Atlanta team.

- Contributed to the platform from concept to **MVP in under 2 months** and to the design of the next block of features involving external integrations.
- Built Next.js features, C#/.NET endpoints and refactors, and maintained a Python cron job that extracted data from three daily spreadsheets to compute daily account updates for clients.

- Integrated **Pipefy via GraphQL** (status queries and new entries) and **WebSockets** for real-time responses.
- Raised test coverage from roughly 60-75% to **close to 100%** across most projects, refactored code against a SonarQube quality gate (88% minimum, 100% target) and fixed a failing CI pipeline.
- Proposed architecture, folder-structure and testing standards for the team.

Full-Stack Developer | Catho (Seek group) Aug 2022 - Apr 2025

Recruiter management platform. Team of a tech lead, a backend developer, a junior developer and a PO.

- Rebuilt the **company registration flow** (frontend and backend) and ran a 15-day **A/B test** against the legacy flow, resulting in **+30% registered companies**.
- Implemented **SSR in Next.js**, aggregating calls to an external microservice on the server for performance while keeping the Lighthouse score as high as possible.
- Built **Node.js Lambda functions** for automatic company eligibility checks (valid CNPJ, email and phone blacklist), reducing manual validation; refactored an Express service for scheduled cancellations; maintained APIs with a **Redis** cache layer.
- Cut a suite of 100+ frontend tests from **3 min to 1.5 min** by migrating from Jest to Vite.
- Set up the base CI pipeline (unit and E2E tests, minimum coverage, typecheck, lint) and turned app-specific components into reusable ones through PRs to the company design system.
- Mentored a junior developer, led frontend decisions on libraries and code organization, and reviewed PRs under a two-approval policy.

Frontend Developer | Grupo Primo Jan 2022 - Jul 2022

- Ported the Finclass and Stage platforms to Samsung (Tizen) and LG Smart TVs with React, Vue.js and TypeScript; worked on the internal content and user management system.
- Helped create a knowledge-sharing guild and mentored developers on Clean Code.

Frontend Developer | iCertus May 2021 - Jan 2022

- Worked on a fiscal management app (inventory, invoicing, receivables): integrated a Ruby API with the frontend, delivered features, refactored legacy code and contributed to testing.

Full-Stack Developer | CRB Constructora Dec 2019 - May 2021

- Led the development of the institutional website and a custom CMS built from scratch (React, Laravel, TypeScript).

EDUCATION & LANGUAGES

FACENS University Center | Bachelor's in Computer Engineering 2018 - 2022

FATEC Sorocaba | Bachelor's in Systems Analysis and Development 2014 - 2017

Languages: English (advanced / fluent, Senac certificate), Portuguese (native)
