Remote | Open to full-time and contract roles

SUMMARY

Senior Full Stack Engineer with 7+ years taking web products from idea to production with TypeScript, React, Next.js and Node.js, across banking, recruitment, life sciences and AI-powered SaaS. Strong in SSR and performance, API design (REST, GraphQL, SSE, WebSockets), automated testing and CI. Rebuilt a registration flow that delivered +30% completed registrations in an A/B test, took a banking platform from concept to production in under 2 months, and halved the run time of a 100+ test suite. Most recently built the backend of an AI print-ordering product (RAG chat, SSE streaming) from scratch to a live beta in about 6 months, using a spec-driven, AI-assisted workflow (Claude Code). Looking for a senior full stack role on a remote, English-speaking product team building SaaS or AI-powered products, owning features from API to UI.

PROFESSIONAL EXPERIENCE

99x | Software consultancy (contractor) **Sep 2025 - Oct 2026**

Full Stack Engineer - Client: Printly (AI-assisted print ordering) Mar 2026 - Oct 2026

New AI product with a customer chat, a print-shop admin panel and a backend. Team of 2 developers and 1 architect; MVP delivered and live in beta with a pilot print shop.

- Took the product from zero to a live beta in about 6 months: designed and built the NestJS / PostgreSQL backend that connects the customer chat, the print-shop admin panel and a RAG assistant
- Let customers place print orders in a conversation instead of a static form, with an AI-generated dynamic order form rendered in the chat and assistant replies streamed over SSE
- Kept a person in the loop when a conversation needs one: built the hand-off from the AI assistant to a print-shop operator, plus lead management and admin tables with server-side pagination (Next.js, TanStack Query, Tailwind CSS)
- Gave each print shop its own isolated users, knowledge base and customer files through multi-tenant authentication (Better Auth) and file management feeding the RAG assistant
- Left the team a safe base to keep shipping on: 100% test coverage on the critical MVP workflows, infrastructure provisioned with Terraform, error monitoring with Sentry, and Biome for linting and formatting

Frontend Engineer - Client: Johnson Law Group (U.S. law firm) Mar 2026 - May 2026

- Let the firm's team update site content without code changes by converting its static pages into dynamic pages managed through its in-house CMS
- Refactored the existing pages, fixing issues and shipping new features, working fully autonomously in parallel with the Printly project

Frontend Engineer - Client: SteepRock (AI-powered SaaS for life sciences) Sep 2025 - Feb 2026

Platform connecting doctors, organizations and hospitals. Teams across the US, Asia and Brazil.

- Refactored the UI with the composition pattern and extracted a reusable Storybook component library
- Cut lint time from over 1 minute to 30 seconds on a large codebase by leading the ESLint to Biome migration
- Delivered an internal admin application end to end (React, Material UI), giving internal teams one place to review and manage the data imported from CSV files
- Coordinated releases and quality with QA teams in India

Full Stack Developer | FCamara (consultancy) - Client: BTG Pactual Apr 2025 - Aug 2025

Greenfield forestry funds platform for the Timberland Investment Group. Team of 2 developers, a tech lead and a PO; weekly meetings in English with the Atlanta team.

- Helped take the platform from concept to production in under 2 months; fund managers now use it in place of spreadsheets
- Built Next.js features and C#/.NET endpoints, and integrated Pipefy via GraphQL and WebSockets for real-time operations approval
- Replaced a manual process with a Python job that computes daily account updates for 20 clients from three daily spreadsheets
- Raised test coverage to meet the SonarQube quality gate (88% minimum) in 4 of 6 repositories

- Fixed the frontend CI pipeline, removing a duplicated environment setup between build and tests
- Introduced a PR template and review standard that other teams adopted to support AI-assisted first-pass reviews

Full Stack Developer | Catho, part of SEEK (online recruitment) Aug 2022 - Apr 2025

Recruiter management platform. Team of a tech lead, a backend developer, a junior developer and a PO.

- Rebuilt the company registration flow end to end (frontend and backend), simplifying the form and speeding up the journey; a 15-day A/B test against the legacy flow showed +30% completed registrations
- Built Node.js AWS Lambda functions that automatically checked the eligibility of hundreds of companies per day (valid CNPJ, email and phone blacklists), replacing manual validation
- Implemented SSR in Next.js, aggregating calls to an external microservice on the server to improve page performance
- Migrated a legacy scheduled-cancellations system to an Express service and maintained APIs backed by a Redis cache
- Cut a 100+ test frontend suite from 3 to 1.5 minutes by migrating from Jest to Vite, and set up the team's CI pipeline (unit and E2E tests, coverage gates, typecheck, lint)
- Contributed reusable components to the company design system, adopted by another product team
- Frontend reference for the team: led library and code-organization decisions, reviewed PRs, and mentored a junior developer who was promoted to mid-level

Frontend Developer | Grupo Primo (online education, millions of users) Jan 2022 - Jul 2022

- Built the Smart TV apps for the Finclass and Stage platforms (Samsung Tizen, LG webOS) with React, Vue.js and TypeScript, continuing work started by a senior developer; the LG app was approved for the store
- Implemented remote-control navigation and accessibility for a no-mouse interface, on TV engines without ES6+ support
- Built the video registration flow and improved components in the internal content and user management system
- Helped create a knowledge-sharing guild for the whole tech team and mentored developers on Clean Code

Frontend Developer | iCertus (fiscal management SaaS) May 2021 - Jan 2022

- Integrated a Ruby API and delivered the invoicing, inventory, product and receivables interfaces (React, Vue.js), in a squad with a backend developer, a tech lead and a PO
- Led the JavaScript to TypeScript migration and broke down oversized components, cutting duplicated code by more than 15%
- Introduced the project's first automated test suite, starting with the critical flows, and co-designed a new Express service

Full Stack Developer | CRB Construtora (large construction company) Dec 2019 - May 2021

- Sole developer on the marketing team; built a CMS and a new institutional website from scratch in ~5 months (Laravel, React, TypeScript, MySQL), including the migration of existing content
- Gave the marketing team autonomy to publish campaign banners, images and product information without developer involvement
- Improved Lighthouse and accessibility scores on the new site

TECHNICAL SKILLS

Frontend: React, Next.js (SSR/SSG), TypeScript, JavaScript, Vue.js, Zustand, Redux, TanStack Query, Tailwind CSS, styled-components, Material UI, Storybook, accessibility

Backend: Node.js, NestJS, Express, REST, GraphQL, WebSockets, SSE, Better Auth (multi-tenant), Redis; also Python, C# (.NET), PHP (Laravel)

Data & Cloud: PostgreSQL, MySQL, MongoDB, AWS (Lambda, S3), Docker, Terraform

Testing & Quality: Jest, Vitest, React Testing Library, Playwright, Cypress, SonarQube, Biome, ESLint

CI/CD & Tooling: GitHub Actions, Vite, Sentry, Git, Figma

Practices: A/B testing, Clean Architecture, DDD, SOLID, code review, mentoring, AI-assisted development (Claude Code: PRD and ADRs, tasks, automated review), Scrum, Kanban

EDUCATION

Bachelor's in Computer Engineering | FACENS University Center 2018 - 2022

Technologist Degree in Systems Analysis and Development | FATEC Sorocaba 2014 - 2017

LANGUAGES

English: Full professional proficiency (C1, Senac certificate) | Portuguese: Native or bilingual
